

we develop
for patients

About us

For more than 30 years, we have been passionate about what we do: **drug development**

We in-license promising compounds with innovative modes of action that will provide a real benefit to patients. We conceive and perform creative development and skillful lifecycle management to out-license these projects to pharmaceutical marketing powerhouses. Drug development is value generating at Debiopharm.

Our success: 2 oncology compounds (Oxaliplatin & Triptorelin), 5 products that have cumulative sales over US\$ 25 billion since launch.

Our growth drivers: 12 innovative compounds under development and 12 in-house clinical trials planned.

Debiopharm is family-owned and run, totally financially independent with a stable revenue stream.

Why partner with us?

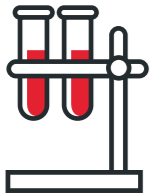

We offer a creative and flexible business model, we share the success with you, and we value strong and long-lasting relationships.

Our Business Model

1 Drug Project

Licensor :

Academic Start-up
Biotech Pharma

INNOVATION
